MONITORED REFLECTIVE PHOTO EYE

The Miller Edge TruGuard monitored reflective photo optic system combines an emitter and receiver in the same housing. The reflector, equipped with hood for added sunlight immunity, returns the photo optic beam to the emitter/receiver unit. This system functions as a protective barrier guarding an entrapment or hazard zone. When an obstruction interrupts the beam, a signal is sent to motor controls to stop and/or reverse motion. A visible light beam eases alignment to the reflector making it easy to install.

APPLICATIONS

- Commercial motorized doors
- Automated vehicular gates

FEATURES

- 30 ft. range
- Output options for operator compatibility (model dependent): 10K, pulsed, N.C., and N.O.
- Easy install and minimal upkeep with reflector
- Polarized beam and corner cube reflector reject false reflection and increase sunlight immunity
- Emitter/receiver mounts vertically or horizontally
- Durable mounting bracket/hoods provide added protection against sunlight, moisture, and debris
- Optional Photo Eye Conduit Enclosure Kit (PE-CON-K10) accessory for 3/4" conduit
- IP67 housing protects against moisture and dust
- UL 325 Recognized Component
- 2-year warranty
