Double Swing Gate Driveway Width: 17' Swings

Loop Layout

For Detecting Commercial and Residential Vehicles

Saw Cut Application

For installation in existing concrete or asphalt roads. Saw-cut loops are cut into the surface and sealed with loop sealant. If you plan to bury loops please go back and select "Direct Burial Application" to view the proper diagrams.

Loop Sizes Needed:

Reverse/Exit Loop: 40' Perimeter Loop

BD Loops Part#: SC 40-50 or SC 40-100

Description: 6' x 14' Loop with 50' or 100' of lead-in

This Loop will have approximately 48" of detection height.

Shadow Loop: 28' Perimeter Loop

BD Loops Part#: SC 28-50

Description: 5' x 9' Loop with 50' of lead-in

This Loop will have approximately 40" of detection height.

These are standard size loops. Standard size loops can ship same day from our Placentia, CA location. *Contact your BD Loops Distributor for more information*.

Notes about Swing Gates:

Swing gates require a minimum of 3 loops to properly protect the gate path as pictured in red above:

- An Inside Reverse Loop or Exit Loop
- A Shadow Loop
- An Outside Reverse Loop

Reverse Loops will hold the gate open, or reverse a closing gate if a vehicle enters or stops within the gate path. The inside reverse loop can be connected to the exit loop function if you desire. An Exit Loop will do everything a reverse loop does and will also open the gate automatically when a car drives over it. A Shadow Loop will check before the gate closes to see if a vehicle is present. When the gate is in motion the shadow loop will not respond to any detection, which is why reverse/exit functions are required on each side of the gate.

Have a long approach on the secure side? An additional exit loop further down the driveway will make the system more convenient for users. They will not have to wait for the gate to open when exiting.

Don't Forget Loop Sealant!

BD-LS Loop Shield is available in Black or Gray. Self Leveling • 100% Solids Low VOC • Quick Skin Time

Made in the USA

BD Loops

Saw-Cut Loop Sizes

The standard size loops listed in the chart to the right are available for same day shipping if BD Loops receives a PO from a distributor by 3:30 pm PST.

Need a bigger loop or longer lead-in lengths?

Custom size loops are available and can ship same day if the PO is received by 12:00 pm PST.

Need to Test Loops?

The **BD-Megger** is an essential testing device that checks for the most common loop issue: a nick in the wire allowing current to leak to ground.

The E-Z Detector Checker quickly checks components upstream from the loop including the detector module, harness wiring, and circuit board loop connections.
