

MillerEdge Sensing Edge Ordering Guide & Edge Feature Comparison

When ordering a sensing edge view the guide below to select your sensing edge configuration. Note that the part number generally indicates the features of the edge.

For example with part number **ME123BK-2U-12-T1**, ME123 is the model, BK is the color, 2 is the switch configuration identifier, U is the outlet location identifier, 12 is the billable length, and T1 is the monitoring method.

Color Codes: Black (**BK**), Yellow (**YE**), Gray (**GY**), Yellow with black stripes (**YB**), and Yellow with XR5 chemical resistance (**YX**).

Switch Configuration Codes: 2-Wire Monitored (**2**), 4-Wire Monitored (**4**), 2-Wire Electric (non-monitored) (**2**), Air-Wave (non-monitored & sold separately) (**AW**), Pneumatic (non-monitored & sold separately) (**P**), and Bumper (no sensor, bumper only) (**0**).

Outlet Location Codes: End (**E**), Left (**L**), Right (**R**), Top (**T**), and Universal (**U**).

Length: can be ordered in 1/4" increments with a manufacturing tolerance of 1/4". The general rule is that if the edge length is greater than or equal to feet and 2 1/4" round up to the next foot. If the edge length is less than or equal to feet and 2" round down to the whole foot. When ordering provide exact measurement needed in feet and inches.

Monitoring Method Codes: 8.2K ohm resistor (**T1**), 10K ohm resistor (**T2**), Diode capacitor (**T3**), Capacitor (**T4**), 6.8K ohm resistor (**T5**), or 270k ohm resistor (**T6**).

*If Switch Configuration is 2-Wire Monitored T1, T2, T3, T4, T5, & T6 are monitoring method options. If Switch Configuration is 2-Wire Non-Monitored or 4-Wire Monitored the designated identifier in the part number will be blank.
