DRIVEGUARD *INTEGRATOR*[™]

The DriveGuard Integrator system is interfaces with any security, home automation or lighting system. Its control unit (CT-2B) has a relay contact, allowing it to seamlessly integrate with any home automation security and lighting system. Simply connect the CT-2B to two zone inputs to trigger any and all features supported by the accompanying system. With just two components, professional vehicle detection can be added to any automated or security system, taking security to the next proactive level.

BENEFITS

Add vehicle detection to any security or home automation system

Trip any feature mother system supports when vehicles drive up

Never be surprised by drive-up visitors again

See who's arrived before they reach the front door

Be alerted at keypads, turn system lights on, interact with email and smartphones

Trip cameras on

APPLICATIONS

Seamlessly integrates with any and all security, home automation, and lighting systems

Use in homes with longer driveways

Use in home with other systems

Commercial applications

FEATURES

Magnetometer technology Sensor buried beside driveway Invisible system Supports up to 4 sensor probes Supports up to 12 sounders Sensitivity and relay time adjustable Supports other sensing devices 5-year warranty

Power Required	8-31 VAC; 10-41 VDC (Issue 4)
	12 VAC or 11-18 VDC (Issue 3)
Stand-By Current Under	1mA
Alarm Current	30 mA max. (board only)
Relay Contact Rating	Double Pole, Double-Throw
	1st Pole: 12 VDC, 200 mA for remotes
	2nd Pole: SPDT, 5 amps, 30 VDC
Relay Time	1/2 to 15 seconds
Temperature Range	0° F 140° F.
Dimensions (With Case)	5½″ x 5½″ x 2″
Dimensions (Board Only)	4 ¹ / ₈ " x 3 ¹ / ₄ "
Weight (With Case)	2.5 lbs.
Weight (Board Only)	1⁄4 lb.

When integrating with security or home automation systems, you will need:

- 1. The manual from your "mother" system
- 2. A resistor, if required (see mother system's manual)

Connect the CT-2B to two zone inputs on your panel. If your system's contacts are normally closed, use terminals 5 & 6 on the CT-2B. At your system's panel, place a resistor, if needed, between the terminals in **parallel** (see mother system's manual for resistor size).

If your system's contacts are normally open, use terminals 6 & 7 on the CT-2B and place a resistor, if needed, between the terminals in **series** (see mother system's manual for resistor size).
